DETAILED ACTION - ALLOWANCE

Claims 1-11 are allowed. All claims thus being allowable, prosecution on the merits is closed in this application. A statement of the examiner's reasons for allowance is provided below in the paragraph which follows below.

Reasons for Allowance

The instant application is deemed to be directed to apparatus for changing the apparent color of a object from one color to another; in which the color of the object is measured and analyzed, and the desired other color is simulated in a beam of light and projected onto the object in real time. The apparatus includes a novel combination of functional elements to perform these functions, including a first light-emitting device which provides modulated lights of three primary colors; a demodulation device that outputs signals representing the intensity of the three primary colored lights, and a second light-emitting device for generating a colored light according to the intensity signals output from the demodulation device as recited in each of the instant independent claims. The prior art taken either singly or in combination fails to anticipate or fairly suggest the limitations of applicant's independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.

Other Remarks/Information

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nakazawa et al. discloses methods for discriminating colors. Wom et al. discloses a reflected color simulator. Steenhoek discloses a portable colorimeter and methods for characterization of a colored surface. Christel et al, Kirollos et al., Burk, and Nelson disclose a wide range of real time color measurement/monitoring systems and devices for continuous process control.
